## Response to Arguments

- 1. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., addressing problem of an "undesirable shortcut path or an undesired source node") are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).
- 2. In response to Civanlar not disclosing MPOA devices, such label does not patentable distinguish the invention. The functionality taught by Civanlar is performed whether the device was labeled IP, Proxy, Domain, and so on.
- 3. In response to applicant's argument that the determining step of whether or not the packet is to be forwarded, based on layer 3 packet filter information, within an ATM network infrastructure, it is noted that a preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

4. In response to the last argument regarding Civanlar, in light of the responses above, Civanlar clearly teaches determining by a server whether or not address resolution request packet is to be forwarded based on layer 3 packet filter information (see col.3, lines 29-43). Furthermore, Civanlar teaches of merging functionality of ATM (layer 2) switch and IP (layer 3) router "to further integrate routing at the IP level into routing at the ATM level" resulting in IP over ATM, which is taught in an "illustrative protocol" by R.Callon (see col.4, line 54 – col.5, line 4).

5. Therefore, claims 2-5, which depends on claim 1, remains rejected.
